Summary: Superstructure is a "receive/transmitter" site virtually unmanned. Structure below ground has several levels with a tunnel off to the side. People in lower structure have slightly Oriental features and wear what appears to be Chinese type jump suits (there is no indication of rank on the clothing). There is a large room below ground with a tall ceiling, approx stories tall & scaffolding-type frame. The people in this lower structure control a piece of sophisticated Air Force weaponry (An Arrow-like a laser) that can be directed away from the earth to any object in the atmosphere that deflects it back to the earth in a different location.

A strike capability is associated with this site.
